# For achieving excellence in European and Global Manufacturing...

ZDMP aims at developing and establishing a digital platform for connected smart factories to achieve excellence in manufacturing through zero-defect processes and products thanks to the use of zero-defect core services for developing Apps.

To validate the concept, four industrial demonstrators are being conducted Automotice, Machine Tools, Construction and Electronics.

ZDMP will also have 3.2 million € available for additional partners wishing to engage the project and improve the platform in the market.
